SUMMARY

Software Engineer with expertise in building engaging, performant frontends and practical experience with backend services and databases. Passionate about delivering seamless user experiences through React and TypeScript with proven ability to independently own features, deliver production-ready code, and collaborate cross-functionally across multiple teams in Agile environments while adhering to internal engineering standards and SDLC best practices.

EXPERIENCE

Software Engineer

Lowe's India

June 2025 - Present

- Drove a **proof-of-concept to securely enable third-party domains to embed and consume form workflows hosted on Lowe's platform**, collaborating with **Akamai, Security, and Enterprise Architecture teams** to design a compliant, production-ready solution.
- Developed a **secure authentication and token exchange flow** for micro-apps, ensuring seamless frontend integration while maintaining strict **CORS, domain whitelisting, and security standards**.
- Enhanced **application observability and reliability** by configuring monitoring, alerts, and dashboards (**Prometheus, Grafana**), enabling proactive detection of performance and availability issues.
- Created end-to-end **automation tests and unit tests** using **Playwright and Karate** to validate critical user flows across browsers and environments.

Associate Software Engineer

Lowe's India

July 2023 - June 2025

- Designed and implemented **JSON-driven, reusable React components** adopted across **3+ projects**, standardizing form elements and significantly reducing development rework and maintenance overhead.
- Built and enhanced **analytics event frameworks** to track customer behavior, optimized event tagging to configure Adobe Analytics dashboards, enabling data-driven product decisions.
- Led a **UI redesign for a high-traffic application**, reducing invalid address submissions by **22%** through improved UX patterns, validation logic, and frontend performance optimizations.
- Increased **JEST test coverage to 80%+** by writing comprehensive unit tests, improving release stability and reducing production regressions.

Engineering Intern

Wabtec Corporation

January 2023 - June 2023

- Independently designed and developed a **responsive, data-driven dashboard** using **HTML, CSS, and JavaScript** to visualize **inventory and simulation lab assets for train testing environments**, transforming Excel-based data into interactive charts and operational insights.
- Collaborated with engineering and operations teams to **gather requirements, iterate on UI/UX prototypes, and deliver features with minimal supervision**, following structured development and review cycles.

PROJECT

Share Your Moments – MERN Stack App

github.com/anushkadubey/Share-Your-Moments

- Built a full-stack social platform with JWT & Google OAuth authentication, and CRUD for posts and likes.

Newsman – Real-Time News Aggregator

github.com/anushkadubey/NewsApp

- Developed a ReactJS news dashboard using NewsAPI, supporting category filters and responsive design.

EDUCATION

B.Tech (Hons), Electronics & Communication Engineering

National Institute of Technology, Jamshedpur • 2019 - 2023 • 8.56

SKILLS

- **Frontend:** HTML, CSS, JavaScript (ES6+), TypeScript, DOM APIs
- **Web Concepts:** HTTP, REST, AJAX, JSON, client-server architecture.
- **APIs:** Building & consuming **RESTful APIs**, strong understanding of REST principles
- **Tooling:** Webpack, NPM/Yarn, Git
- **Databases:** Strong understanding of SQL querying & update operations.
- **Backend:** NodeJS, Express
